

When security analysts are hunting for evidence that an unknown threat is present, they need all security data available at their fingertips to easily find what they're looking for. However, what usually happens is that analysts must scour multiple systems, sometimes using completely different search languages to pinpoint what they're looking for.

Stitching together and sifting through data from multiple disparate systems this way is not only inefficient, it's annoying. Not only do security analysts and threat hunters need to have advanced skills, but their valuable time is spent just getting to the data they need instead of using their instincts and expertise to follow that data, explore divergent hypotheses, and uncover covert threat operations inside the network. They don't see everything at once, correlating data and analyses is cumbersome, and digging into details requires prior knowledge — they must already know what indicators they're looking for, and use the exact search string to track it down.

EASILY EXPLORE THE "WHEN" AND "HOW" BEHIND ANY EVENT ACROSS ALL YOUR DATA

The E8 Security Fusion Platform puts every detail surrounding every event at your fingertips with its Data Fusion™ technology. It provides an easily explorable view of all enterprise security data – endpoint, user, and network data – on the Fusion Platform's big data infrastructure. All enterprise security data is in one place on the Fusion Platform's big data infrastructure, and is analyzed by its advanced machine-learning algorithms to provide an organized, searchable view of what's going on within an organization at any given time as it relates to historical trends.

Data Fusion provides unprecedented visibility into the digital goings-on within an enterprise, so that analysts can easily explore situational information and event details, and come to conclusions quickly. Security analysts instantly understand the circumstances surrounding every behavior, pivot to related data points, and explore interesting characteristics, making investigation and hunting processes faster, and shifting security operations to a more proactive role in enterprise defense. Data Fusion enables security analysts to:

- Holistically view and analyze security data from separate systems
- Easily search and filter on any log detail across all security data as far back in time as they like, and pivot to different data facets as they proactively investigate incidents
- Compare historical trends and relationships through retrospective analysis

Visualize and hone in on behaviors of interest, and swiftly explore corresponding data facets.

Search and filter data quickly and intuitively, without hopping to different systems or crafting lengthy queries.

E8 Security is transforming security operations by automating the learning of user and device behaviors to discover malicious activity unknown to security analysts, resulting in improved alert quality and accelerated investigations to make security operations more proactive. E8 Security raises the bar, as the first behavioral analytics vendor to make it easier for security teams to quickly identify unknown threat behaviors across endpoints, users and networks. The E8 Security Fusion Platform provides a focused view of the network, so that analysts can quickly see hidden threats and know where to spend their time, reducing the investigation time from hours to minutes. In short, E8 Security helps security teams to detect, hunt, and respond by recognizing what is normal in their network so they can quickly respond to what is not. E8 Security is headquartered in Silicon Valley and is funded by Strategic Cyber Ventures, March Capital Partners, Allegis Capital and The Hive. Find out more at www.e8security.com.
